

Project Design Phase

Problem – Solution Fit Template

Date	30 June 2026
Team ID	
Project Name	Comprehensive Analysis and Dietary Strategies with Tableau: A College Food Choices Case Study
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ Understand the existing situation in order to improve it for your target group.

Template:

1. CUSTOMER SEGMENT(S) CS Who is your customer? Primary Segment: College students (e.g., engineering students like Rahul, first-years facing exam stress like Priya). Secondary Segment: Institutional stakeholders (University Cafeteria Managers, campus nutritionists, wellness services).	6. CUSTOMER CONSTRAINTS CC What constraints limit their choices or prevent action? Students: Severe academic time constraints, restricted budgets for healthy options, emotional pressure during exam periods, lack of immediate caloric visibility. Cafeteria Managers: Tight operational budgets, supply limitations, and risk of financial loss on healthy additions without proof of baseline demand.	5. AVAILABLE SOLUTIONS AS What solutions are available? Pros & cons? Generic Campus Pamphlets / Health Advice Pros: Accessible. Cons: Static, unengaging, completely detached from actual local campus habits. Standard Cafeteria Menus Pros: Predictable. Cons: Lacks healthy, fresh variety, forcing quick reliance on fast foods.
2. JOBS-TO-BE-DONE / PROBLEMS JBP Which jobs or problems do you address? Students: Maintaining mental concentration and high energy while working through stress-driven eating patterns. Cafeteria Managers: Aligning local menu variety with true student eating habits to encourage wellness. Wellness Services: Aggregating complex raw survey details into straightforward health strategies.	9. PROBLEM ROOT CAUSE RC What is the real reason this problem exists? Visibility Deficit: Students cannot easily visualize the explicit, empirical connections between skipped meals (like breakfast) and degraded test focus or energy dips. Convenience Ecosystem: Institutional patterns natively favor fast food distribution over fresh options when time-crunched.	7. BEHAVIOUR BE What does your customer currently do? Directly Related: Skipping major breakfasts to save time, ordering fast food, or turning to heavy comfort snacks when bored or anxious. Indirectly Associated: Complaining of midday fatigue, hunting for sudden caffeine/energy fixes, or skipping campus options entirely.
3. TRIGGERS TR What triggers customers to act? Students: Striking focus drops during lectures, intense early morning fatigue, or overeating snacks due to exam stress. Managers: Seeing high food waste, experiencing low sales metrics for healthy items, or receiving complaints regarding lack of options.	10. YOUR SOLUTION SL What is your solution proposition? An Interactive Tableau Analytics Dashboard suite. For Students: Maps data trends connecting healthy diets to higher concentration, visually driving personal habit changes. For Cafeterias: Equips managers with visual evidence of high fast-food reliance to confidently deploy salad bars and balanced combos.	8. CHANNELS OF BEHAVIOUR CH 8.1 ONLINE - Interacting with live Tableau analytical dashboards embedded inside student portals or university health pages. 8.2 OFFLINE - Visiting campus dining halls, ordering late-night fast food, or engaging with physical wellness center operations.
4. EMOTIONS: BEFORE / AFTER EM How do they feel before and after? Before: Fatigued, stressed, reactive to food cravings, overwhelmed, and completely disconnected from actual dietary data. After: Well-informed, energized, proactive, and securely in control of daily health behaviors and academic productivity.
